

iNELS for everything, everywhere

Selection of references

Smart Home & Building electro-installations

The new industrial branch Smart electro-installation has been developing by quantum leaps in recent years. ELKO EP has kept a careful eye on these trends, and with them in mind, it has introduced the iNELS system to the market. Through its wide-ranging versatility, it covers contemporary requirements for intelligent electrical installations for various sized buildings: from apartments to family homes, villas and hotels to factories.

In this brochure, you will find a selection of over 5,000 installations that iNELS has performed in its existence. References are thematically grouped based on type of building. It is not a complete listing, but offers inspiration. It includes apartments, homes, villas and hotels, but also commercial and historical buildings.

APARTMENT & HOUSE

Owners of existing apartments and houses in which electrical installations already exist need not worry. We have prepared for them an iNELS wireless version – RF Control. As the name implies, it functions wirelessly, so there is no need to install or rearrange cabling. The wireless iNELS includes functions for controlling appliances, dimming lights, timing for shutters and blinds and heat regulation.

For larger houses and villas, we recommend the system iNELS BUS. The basis of the structure is a communications data cable, a so-called bus, by which all sensors, controllers and performance elements in the home are connected. The advantage is not only in the amount of functions that the bus brings, but also the option of integrating third-party devices: video cameras, kitchen appliances, devices for heating, air-conditioning, heat pumps, solar systems, photo voltaic systems, energy management and much more.

www.inels.com/apartment

Benefits

Security

The built-in alarm not only watches for burglars, but also for gas leaks or fires.

Savings

By proper regulation of the temperature and linkage of home technologies, you can achieve substantial savings.

Automation

All functions take place in the background without bothering you. The system monitors, regulates,...

Design

Glass touch controllers in white or black stand out in any interior.

Remote monitoring

Whether you are at home or away, your home remains under the constant control of your smartphone.

HOTEL

In recent years, iNELS has been developed for horizontal control of technologies not only for hotels but also for apartment houses, office buildings and everywhere it is necessary to resolve separate access of current residents, as well as their comfort.

iNELS in the form of GRMS (Guest Room Hotel Management System) enables not only control of lighting, air-conditioning or room access, but also control of music or television. All of this occurs from the central touch panel in designs of clear plastic, the natural materials wood, metal, stone or luxurious glass touch panels. A standard service we offer customers is customization - a description of symbols applied by laser onto plastic or glass controllers based on specification.

www.inels.com/hotel

Benefits

Adjust to guest

Thanks to integration into a hotel system, it is possible to create a room scene when a guest registers.

GRMS

Guest Room Hotel Management System.

Comfort

The combination of automatic illumination based on motion and central control of the room.

Do Not Disturb

Guests can very easily signal if they want the room cleaned, or do not want to be disturbed.

Master off/Energy saver

When the guest then leaves, the system automatically disconnects all electrical appliances

COMMERCIAL

iNELS finds more and more application in the wide sphere of commercial buildings – stores, offices, restaurants, hospitals, but also in historical buildings or manufacturing halls.

Though it is most frequently used to control lighting and HVAC, you will find iNELS projects using an access system, shading control, a video camera security system or distribution of audio/video.

The main emphasis is placed on problem-free operation of the building, efficient energy use and operations security. iNELS meets these needs to the fullest.

www.inels.com/commercial

Benefits

Connection to BMS

iNELS can easily be connected to a Building Management System.

Energy saving

Appropriate regulation saves costs in building operation in terms of heating, cooling, water heating, etc.

Automation

Guests can very easily signal if they want the room cleaned, or do not want to be disturbed.

Access system

Based on access rights, the system controls employee and visitor access to various parts of a building.

Versatility

The system is suitable for installing in large and small commercial buildings alike.
